

REGENERATING

G

Facial serum

A gel-like, transparent consistency that effectively accelerates cell renewal thanks to Gardenia stem cell extract. In combination with hyaluronic acid, it long-lastingly moisturizes dehydrated skin, fills the intercellular space and smoothes fine lines and wrinkles.

Stem cell extract – regenerates withered and sagging facial skin, enhances collagen synthesis and slows down the aging process.

Hyaluronic acid – a natural skin component, it has an extraordinary ability to retain water nearly a thousand times more than its own weight. What is used in REFAN's products is the branched-chain hyaluronic acid (cross-linked hyaluronic acid), which due to its structure has a high water-absorbing capacity, similar to high-molecular hyaluronic acid, but much more stable to enzymatic degradation and with easier penetration into the skin. Branched-chain hyaluronic acid is well known as a skin filler. Dermatologists inject it directly into the skin to physically fill in wrinkles from within. Many consumers do not like this invasive and expensive approach and therefore look for cosmetic products that imitate the properties of dermal fillers. REFAN uses exactly this type of hyaluronic acid.

Use: Apply with gentle patting movements, as a base before the day or night cream, on cleansed and dry face skin.
